rT3 (Reverse Triiodothyronine) ELISA Kit

Cat #: G-EC-00052

Species: Universal

Sensitivity: 56.25pg/mL

Type: Competitive

Range: 93.75~6000pg/mL

Detection: Colormetric

Duration: 2.5h

Principle:
This ELISA kit uses the Competitive-ELISA principle. The micro ELISA plate provided in this kit has been pre-coated with rT3. During the reaction, rT3 in samples or Standard competes with a fixed amount of rT3 on the solid phase supporter for sites on the Biotinylated Detection Ab specific to rT3. Excess conjugate and unbound sample or standard are washed from the plate, and Avidin conjugated to Horseradish Peroxidase (HRP) are added to each microplate well and incubated. Then a TMB substrate solution is added to each well. The enzyme-substrate reaction is terminated by the addition of stop solution and the color change is measured spectrophotometrically at a wavelength of 450 ± 2 nm. The concentration of rT3 in the samples is then determined by comparing the OD of the samples to the standard curve.

Specificity:
This kit recognizes rT3 in samples. No significant cross-reactivity or interference between rT3 and analogues was observed.

UniProt ID:

Gene: rT3

Synonyms:

Specimen: Serum, plasma and other biological fluids

Application: This ELISA kit applies to the in vitro quantitative determination of rT3 concentrations in Serum, plasma and other biological fluids.

Research Areas: Metabolism

Storage:
An unopened kit can be stored at 2-8°C for 1 month. If the kit is not supposed to be used within 1 month, store the items separately according to the storage table in the manual once the kit is received.
