Rat ERN1 (Endoplasmic Reticulum To Nucleus Signalling 1) CLIA Kit

Cat #: G-EC-01876

Species: Rat

Sensitivity: 4.69pg/mL

Type: Sandwich

Range: 7.81~500pg/mL

Detection: Chemiluminescence

Duration: 3.5h

Principle:
This CLIA kit uses the Sandwich-CLIA principle. The micro CLIA plate provided in this kit has been pre-coated with an antibody specific to Rat ERN1. Standards or samples are added to the micro CLIA plate wells and combined with the specific antibody. Then a biotinylated detection antibody specific for Rat ERN1 and Avidin-Horseradish Peroxidase (HRP) conjugate are added successively to each micro plate well and incubated. Free components are washed away. The substrate solution is added to each well. Only those wells that contain Rat ERN1, biotinylated detection antibody and Avidin-HRP conjugate will appear fluorescence. The Relative light unit (RLU) value is measured by the Chemiluminescence immunoassay analyzer. The RLU value is positively associated with the concentration of Rat ERN1. You can calculate the concentration of Rat ERN1 in the samples by comparing the RLU value of the samples to the standard curve.

Specificity:
This kit recognizes Rat ERN1 in samples. No significant cross-reactivity or interference between Rat ERN1 and analogues was observed.

UniProt ID:

Gene: ERN1

Synonyms:

Specimen: Serum, plasma and other biological fluids

Application: This CLIA kit applies to the in vitro quantitative determination of Rat ERN1 concentrations in Serum, plasma and other biological flui

Research Areas: Neuroscience, Developmental biology, Cardiovascular

Storage:
An unopened kit can be stored at 2-8°C for 1 month. If the kit is not supposed to be used within 1 month, store the items separately according to the storage table in the manual once the kit is received.
