Mouse FG (Fibrinogen) ELISA Kit

Cat #: G-EC-04363

Species: Mouse

Sensitivity: 9.38ng/mL

Type: Sandwich

Range: 15.63~1000ng/mL

Detection: Colormetric

Duration: 3.5h

Principle:
This ELISA kit uses the Sandwich-ELISA principle. The micro ELISA plate provided in this kit has been pre-coated with an antibody specific to Mouse FG. Samples (or Standards) are added to the micro ELISA plate wells and combined with the specific antibody. Then a biotinylated detection antibody specific for Mouse FG and Avidin-Horseradish Peroxidase (HRP) conjugate are added successively to each micro plate well and incubated. Free components are washed away. The substrate solution is added to each well. Only those wells that contain Mouse FG, biotinylated detection antibody and Avidin-HRP conjugate will appear blue in color. The enzyme-substrate reaction is terminated by the addition of stop solution and the color turns yellow. The optical density (OD) is measured spectrophotometrically at a wavelength of 450 ± 2 nm. The OD value is proportional to the concentration of Mouse FG. You can calculate the concentration of Mouse FG in the samples by comparing the OD of the samples to the standard curve.

Specificity:
This kit recognizes Mouse FG in samples. No significant cross-reactivity or interference between Mouse FG and analogues was observed.

UniProt ID: E9PV24 (Fga) &Q8K0E8 (Fgb) &Q8VCM7 (Fgg)

Gene: FG

Synonyms:

Specimen: Serum, plasma and other biological fluids

Application: This ELISA kit applies to the in vitro quantitative determination of Mouse FG concentrations in Serum, plasma and other biological fl

Research Areas: Cancer, Cardiovascular, Metabolism

Storage:
An unopened kit can be stored at 2-8°C for 1 month. If the kit is not supposed to be used within 1 month, store the items separately according to the storage table in the manual once the kit is received.
