Mouse ERN1 (Endoplasmic Reticulum To Nucleus Signalling 1) CLIA Kit

Cat #: G-EC-01413

Species: Mouse

Sensitivity: 7.5pg/mL

Type: Sandwich

Range: 12.5~800pg/mL

Detection: Chemiluminescence

Duration: 3.5h

Principle:
This CLIA kit uses the Sandwich-CLIA principle. The micro CLIA plate provided in this kit has been pre-coated with an antibody specific to Mouse ERN1. Standards or samples are added to the micro CLIA plate wells and combined with the specific antibody. Then a biotinylated detection antibody specific for Mouse ERN1 and Avidin-Horseradish Peroxidase (HRP) conjugate are added successively to each micro plate well and incubated. Free components are washed away. The substrate solution is added to each well. Only those wells that contain Mouse ERN1, biotinylated detection antibody and Avidin-HRP conjugate will appear fluorescence. The Relative light unit (RLU) value is measured by the Chemiluminescence immunoassay analyzer. The RLU value is positively associated with the concentration of Mouse ERN1. You can calculate the concentration of Mouse ERN1 in the samples by comparing the RLU value of the samples to the standard curve.

Specificity:
This kit recognizes Mouse ERN1 in samples. No significant cross-reactivity or interference between Mouse ERN1 and analogues was observed.

UniProt ID:

Gene: ERN1

Synonyms:

Specimen: Serum, plasma and other biological fluids

Application: This CLIA kit applies to the in vitro quantitative determination of Mouse ERN1 concentrations in Serum, plasma and other biological

Research Areas: Neuroscience, Developmental biology, Cardiovascular

Storage:
An unopened kit can be stored at 2-8°C for 1 month. If the kit is not supposed to be used within 1 month, store the items separately according to the storage table in the manual once the kit is received.
