Mouse GAL12 (Galectin 12) CLIA Kit

Cat #: G-EC-01449

Species: Mouse

Sensitivity: 7.5pg/mL

Type: Sandwich

Range: 12.5~800pg/mL

Detection: Chemiluminescence

Duration: 3.5h

Principle:
This CLIA kit uses the Sandwich-CLIA principle. The micro CLIA plate provided in this kit has been pre-coated with an antibody specific to Mouse GAL12. Standards or samples are added to the micro CLIA plate wells and combined with the specific antibody. Then a biotinylated detection antibody specific for Mouse GAL12 and Avidin-Horseradish Peroxidase (HRP) conjugate are added successively to each micro plate well and incubated. Free components are washed away. The substrate solution is added to each well. Only those wells that contain Mouse GAL12, biotinylated detection antibody and Avidin-HRP conjugate will appear fluorescence. The Relative light unit (RLU) value is measured by the Chemiluminescence immunoassay analyzer. The RLU value is positively associated with the concentration of Mouse GAL12. You can calculate the concentration of Mouse GAL12 in the samples by comparing the RLU value of the samples to the standard curve.

Specificity:
This kit recognizes Mouse GAL12 in samples. No significant cross-reactivity or interference between Mouse GAL12 and analogues was observed.

UniProt ID:

Gene: GAL12

Synonyms:

Specimen: Serum, plasma and other biological fluids

Application: This CLIA kit applies to the in vitro quantitative determination of Mouse GAL12 concentrations in Serum, plasma and other biologica

Research Areas: Cell Biology

Storage:
An unopened kit can be stored at 2-8°C for 1 month. If the kit is not supposed to be used within 1 month, store the items separately according to the storage table in the manual once the kit is received.
