Human TINF2 (TERF1 Interacting Nuclear Factor 2) ELISA Kit

Cat #: G-EC-03470

Species: Human

Sensitivity: 0.09ng/mL

Type: Sandwich

Range: 0.16~10ng/mL

Detection: Colormetric

Duration: 3.5h

Principle:
This ELISA kit uses the Sandwich-ELISA principle. The micro ELISA plate provided in this kit has been pre-coated with an antibody specific to Human TINF2. Samples (or Standards) are added to the micro ELISA plate wells and combined with the specific antibody. Then a biotinylated detection antibody specific for Human TINF2 and Avidin-Horseradish Peroxidase (HRP) conjugate are added successively to each micro plate well and incubated. Free components are washed away. The substrate solution is added to each well. Only those wells that contain Human TINF2, biotinylated detection antibody and Avidin-HRP conjugate will appear blue in color. The enzyme-substrate reaction is terminated by the addition of stop solution and the color turns yellow. The optical density (OD) is measured spectrophotometrically at a wavelength of 450 ± 2 nm. The OD value is proportional to the concentration of Human TINF2. You can calculate the concentration of Human TINF2 in the samples by comparing the OD of the samples to the standard curve.

Specificity:
This kit recognizes Human TINF2 in samples. No significant cross-reactivity or interference between Human TINF2 and analogues was observed.

UniProt ID: Q9BSI4

Gene: TINF2

Synonyms: TIN2, DKCA3

Specimen: Serum, plasma and other biological fluids

Application: This ELISA kit applies to the in vitro quantitative determination of Human TINF2 concentrations in Serum, plasma and other biologic

Research Areas: Cancer, Epigenetics and Nuclear Signaling

Storage:
An unopened kit can be stored at 2-8°C for 1 month. If the kit is not supposed to be used within 1 month, store the items separately according to the storage table in the manual once the kit is received.
