Rat HIF-1 (Hypoxia Inducible Factor 1 Alpha) CLIA Kit

Cat #: G-EC-01947

Species: Rat

Sensitivity: 1.88pg/mL

Type: Sandwich

Range: 3.13~200pg/mL

Detection: Chemiluminescence

Duration: 3.5h

Principle:
This CLIA kit uses the Sandwich-CLIA principle. The micro CLIA plate provided in this kit has been pre-coated with an antibody specific to Rat HIF-1. Standards or samples are added to the micro CLIA plate wells and combined with the specific antibody. Then a biotinylated detection antibody specific for Rat HIF-1 and Avidin-Horseradish Peroxidase (HRP) conjugate are added successively to each micro plate well and incubated. Free components are washed away. The substrate solution is added to each well. Only those wells that contain Rat HIF-1, biotinylated detection antibody and Avidin-HRP conjugate will appear fluorescence. The Relative light unit (RLU) value is measured by the Chemiluminescence immunoassay analyzer. The RLU value is positively associated with the concentration of Rat HIF-1. You can calculate the concentration of Rat HIF-1 in the samples by comparing the RLU value of the samples to the standard curve.

Specificity:
This kit recognizes Rat HIF-1 in samples. No significant cross-reactivity or interference between Rat HIF-1 and analogues was observed.

UniProt ID:

Gene: HIF-1

Synonyms: HIF1A, HIF-1A, MOP1, PASD8, bHLHe78, basic helix-loop-helix transcription factor

Specimen: Serum, plasma and other biological fluids

Application: This CLIA kit applies to the in vitro quantitative determination of Rat HIF-1 concentrations in Serum, plasma and other biological flui

Research Areas: Cancer, Cardiovascular, Epigenetics and Nuclear Signaling, Metabolism

Storage:
An unopened kit can be stored at 2-8°C for 1 month. If the kit is not supposed to be used within 1 month, store the items separately according to the storage table in the manual once the kit is received.
