Rat SELE (E-selectin) ELISA Kit

Cat #: G-EC-05650

Species: Rat

Sensitivity: 37.5pg/mL

Type: Sandwich

Range: 62.5~4000pg/mL

Detection: Colormetric

Duration: 3.5h

Principle:
This ELISA kit uses the Sandwich-ELISA principle. The micro ELISA plate provided in this kit has been pre-coated with an antibody specific to Rat SELE. Samples (or Standards) are added to the micro ELISA plate wells and combined with the specific antibody. Then a biotinylated detection antibody specific for Rat SELE and Avidin-Horseradish Peroxidase (HRP) conjugate are added successively to each micro plate well and incubated. Free components are washed away. The substrate solution is added to each well. Only those wells that contain Rat SELE, biotinylated detection antibody and Avidin-HRP conjugate will appear blue in color. The enzyme-substrate reaction is terminated by the addition of stop solution and the color turns yellow. The optical density (OD) is measured spectrophotometrically at a wavelength of 450 ± 2 nm. The OD value is proportional to the concentration of Rat SELE. You can calculate the concentration of Rat SELE in the samples by comparing the OD of the samples to the standard curve.

Specificity:
This kit recognizes Rat SELE in samples. No significant cross-reactivity or interference between Rat SELE and analogues was observed.

UniProt ID: P98105

Gene: SELE

Synonyms: CD62E, ELAM, ELAM1, ESEL, LECAM2

Specimen: Serum, plasma and other biological fluids

Application: This ELISA kit applies to the in vitro quantitative determination of Rat SELE concentrations in Serum, plasma and other biological flui

Research Areas: Cancer, Cardiovascular, Immunology, Stem cells

Storage:
An unopened kit can be stored at 2-8°C for 1 month. If the kit is not supposed to be used within 1 month, store the items separately according to the storage table in the manual once the kit is received.
