Human IDO (Indoleamine-2, 3-Dioxygenase) ELISA Kit

Cat #: G-EC-03488

Species: Human

Sensitivity: 0.19ng/mL

Type: Sandwich

Range: 0.31~20ng/mL

Detection: Colormetric

Duration: 3.5h

Principle:
This ELISA kit uses the Sandwich-ELISA principle. The micro ELISA plate provided in this kit has been pre-coated with an antibody specific to Human IDO. Samples (or Standards) are added to the micro ELISA plate wells and combined with the specific antibody. Then a biotinylated detection antibody specific for Human IDO and Avidin-Horseradish Peroxidase (HRP) conjugate are added successively to each micro plate well and incubated. Free components are washed away. The substrate solution is added to each well. Only those wells that contain Human IDO, biotinylated detection antibody and Avidin-HRP conjugate will appear blue in color. The enzyme-substrate reaction is terminated by the addition of stop solution and the color turns yellow. The optical density (OD) is measured spectrophotometrically at a wavelength of 450 ± 2 nm. The OD value is proportional to the concentration of Human IDO. You can calculate the concentration of Human IDO in the samples by comparing the OD of the samples to the standard curve.

Specificity:
This kit recognizes Human IDO in samples. No significant cross-reactivity or interference between Human IDO and analogues was observed.

UniProt ID: P14902

Gene: IDO

Synonyms: IDO-1, INDO

Specimen: Serum, plasma and other biological fluids

Application: This ELISA kit applies to the in vitro quantitative determination of Human IDO concentrations in Serum, plasma and other biological

Research Areas: Cancer, Cardiovascular, Metabolism, Signal transduction

Storage:
An unopened kit can be stored at 2-8°C for 1 month. If the kit is not supposed to be used within 1 month, store the items separately according to the storage table in the manual once the kit is received.
