Rat CTACK (Cutaneous T-Cell Attracting Chemokine) ELISA Kit

Cat #: G-EC-05282

Species: Rat

Sensitivity: 37.5pg/mL

Type: Sandwich

Range: 62.5~4000pg/mL

Detection: Colormetric

Duration: 3.5h

Principle:
This ELISA kit uses the Sandwich-ELISA principle. The micro ELISA plate provided in this kit has been pre-coated with an antibody specific to Rat CTACK. Samples (or Standards) are added to the micro ELISA plate wells and combined with the specific antibody. Then a biotinylated detection antibody specific for Rat CTACK and Avidin-Horseradish Peroxidase (HRP) conjugate are added successively to each micro plate well and incubated. Free components are washed away. The substrate solution is added to each well. Only those wells that contain Rat CTACK, biotinylated detection antibody and Avidin-HRP conjugate will appear blue in color. The enzyme-substrate reaction is terminated by the addition of stop solution and the color turns yellow. The optical density (OD) is measured spectrophotometrically at a wavelength of 450 ± 2 nm. The OD value is proportional to the concentration of Rat CTACK. You can calculate the concentration of Rat CTACK in the samples by comparing the OD of the samples to the standard curve.

Specificity:
This kit recognizes Rat CTACK in samples. No significant cross-reactivity or interference between Rat CTACK and analogues was observed.

UniProt ID: D4AAL6

Gene: CTACK

Synonyms: CCL27, SCYA27, ALP, ILC, Skinkine, ESkine, PESKY, CTAK

Specimen: Serum, plasma and other biological fluids

Application: This ELISA kit applies to the in vitro quantitative determination of Rat CTACK concentrations in Serum, plasma and other biological f

Research Areas: Cancer, Immunology

Storage:
An unopened kit can be stored at 2-8°C for 1 month. If the kit is not supposed to be used within 1 month, store the items separately according to the storage table in the manual once the kit is received.
