Rat NOS3/eNOS (Nitric Oxide Synthase 3, Endothelial) ELISA Kit

Cat #: G-EC-05335

Species: Rat

Sensitivity: 9.38pg/mL

Type: Sandwich

Range: 15.63~1000pg/mL

Detection: Colormetric

Duration: 3.5h

Principle:
This ELISA kit uses the Sandwich-ELISA principle. The micro ELISA plate provided in this kit has been pre-coated with an antibody specific to Rat NOS3/eNOS. Samples (or Standards) are added to the micro ELISA plate wells and combined with the specific antibody. Then a biotinylated detection antibody specific for Rat NOS3/eNOS and Avidin-Horseradish Peroxidase (HRP) conjugate are added successively to each micro plate well and incubated. Free components are washed away. The substrate solution is added to each well. Only those wells that contain Rat NOS3/eNOS, biotinylated detection antibody and Avidin-HRP conjugate will appear blue in color. The enzyme-substrate reaction is terminated by the addition of stop solution and the color turns yellow. The optical density (OD) is measured spectrophotometrically at a wavelength of 450 ± 2 nm. The OD value is proportional to the concentration of Rat NOS3/eNOS. You can calculate the concentration of Rat NOS3/eNOS in the samples by comparing the OD of the samples to the standard curve.

Specificity:
This kit recognizes Rat NOS3/eNOS in samples. No significant cross-reactivity or interference between Rat NOS3/eNOS and analogues was observed.

UniProt ID: Q62600

Gene: NOS3/eNOS

Synonyms: ECNOS, NOS III, E-NOS

Specimen: Serum, plasma and other biological fluids

Application: This ELISA kit applies to the in vitro quantitative determination of Rat NOS3/eNOS concentrations in Serum, plasma and other biolo

Research Areas: Cancer, Cell Biology, Cardiovascular, Metabolism, Neuroscience

Storage:
An unopened kit can be stored at 2-8°C for 1 month. If the kit is not supposed to be used within 1 month, store the items separately according to the storage table in the manual once the kit is received.
