## NFB-p65 Polyclonal Antibody

Cat \#: G-AB-05918

| Host: Rabbit | Reactivity: Human, Mouse, Rat |
| :--- | :--- |
| Isotype: IgG | Clonality: Polyclonal |

## Overview:

Proteins encoded by the v-Rel viral oncogene and its cellular homolog, c-Rel,are members of a family of transcription factors that include the two subunits of the transcription factor NFB (p50 and p65) and the Drosophila maternal morphogen, dorsal. Both proteins specifically bind to DNA sequences that are the same or slight variations of the $10 \mathrm{bp} B$ sequence in the immunoglobulin light chain enhancer. This same sequence is also present in a number of other cellular and viral enhancers. The DNA binding activity of NFB is activated and NFB is subsequently transported from the cytoplasm to the nucleus in cells exposed to mitogens or growth factors. cDNAs encoding precursors for two distinct proteins of the same size have been described, designated p105 and p100. The p105 precursor contains p50 at its N-terminus and a C-terminal region that when expressed as a separate molecule, designated pdI, binds to p50 and regulates its activity.

## Gene ID:

## Accession \#:

Immunogen: Synthesized peptide derived from human NFB-p65 around the non-phosphorylation site of Ser281.

Conjugation: Unconjugated
Swissprot: Q04206

Calculated Molecular Weight: 60 kDa
Observed Molecular Weight: 60 kDa
Concentration: $1 \mathrm{mg} / \mathrm{mL}$
Buffer: PBS with $0.02 \%$ sodium azide, $0.5 \%$ BSA and $50 \%$ glycerol, pH7.4
Purification Method: Affinity purification
Application: WB,IHC-p,ELISA
Dilution: WB 1:500-1:2000, IHC 1:100-1:300, ELISA 1:5000
Storage: Store at $-20^{\circ} \mathrm{C}$. Avoid freeze / thaw cycles.
